PROFESSIONAL SUMMARY

Software Design Engineer with 3+ years of experience in full-stack web, mobile, and microservice-based application development. Experienced in smart metering, energy management, and EV charging platforms.

EXPERIENCE

Senior Software Design Engineer | Delta Electronics India Pvt. Ltd. | Apr 2025 – Present

- Lead end-to-end development and delivery of enterprise web and mobile platforms, covering frontend applications, backend services, databases, microservices, and deployment workflows.
- Lead development of critical HES platform modules, including remote device operation workflows, while collaborating closely with firmware teams for device communication and integration.
- Design and maintain Node.js and Python microservices for device registration, scheduling, report generation, and automation workflows across smart metering platforms.
- Manage Docker-based deployments using NGINX and GitLab CI/CD pipelines, ensuring reliable application delivery, environment consistency, and streamlined release processes.
- Drive troubleshooting, root-cause analysis, and cross-functional issue resolution across application, database, and infrastructure layers.

Software Design Engineer | Delta Electronics India Pvt. Ltd. | March 2023 – Apr 2025

- Developed full-stack applications using Angular, React, React Native, Node.js, Python, and PHP across smart metering and EV charging management platforms.
- Owned frontend development and backend service implementation for remote device operation modules, enabling seamless management of metering infrastructure workflows.
- Built REST APIs, database integrations, and microservices using Node.js and Python while working extensively with MySQL, PostgreSQL, MongoDB, and SQLite.
- Developed EV charging platform services including reservation management, transaction processing, and communication workflows using RabbitMQ and Socket.IO.
- Worked with Linux, Docker, GitLab, and CI/CD practices for application deployment, maintenance, debugging, and feature delivery across multiple product teams.

PROJECTS

HES – AMI Web Platform | MEAN, Python, SQL, TypeScript, Docker, Jenkins, GitLab CI/CD

- Built and enhanced smart metering management modules supporting remote operations, reporting workflows, scheduler automation, and device lifecycle management.
- Owned frontend development and key backend services, including device registration, report generation, and scheduler-based automation using Node.js and Python.
- Collaborated closely with firmware teams to integrate device communication workflows and enable remote meter configuration and management capabilities.
- Worked with Docker, Jenkins, and GitLab CI/CD pipelines to support application deployment, testing, and environment management.

- DRMS – Metering Operations Platform | MERN Stack, Node.js, MongoDB, React, Docker, Linux, Git
- Developed real-time dashboards and monitoring interfaces for metering infrastructure, providing visibility into device health, alarms, uptime, downtime, and billing operations.
 - Implemented remote operation capabilities allowing users to retrieve and update device parameters through integrations with firmware-managed communication services.
 - Collaborated with firmware and backend teams to ensure seamless synchronization between field devices, application services, and operational databases.
 - Worked across the full application stack, contributing to feature development, debugging, deployment activities, and platform enhancements.
- EVCS Platforms (Web & Mobile) | MERN Stack, React Native, RabbitMQ, Socket.IO, OCPP, Docker, PHP
- Developed web and mobile applications for electric vehicle charging station management, including reservation, transaction, and communication workflows.
 - Built backend microservices for reservation handling, transaction processing, communication workflows, and charging session management using Node.js and MongoDB.
 - Implemented real-time communication and event-driven workflows using RabbitMQ and Socket.IO to support responsive charging station interactions.
 - Integrated OCPP-based charging station communication and collaborated with cross-functional teams to enable seamless coordination between charging infrastructure and application services.
 - Developed internal PHP-based support tools for log management, script execution, file access, download workflows, and remote service operations, improving troubleshooting and maintenance efficiency.

TECHNICAL SKILLS

Programming Languages			
JavaScript	TypeScript	Python	C#
C++	C	Java	PHP
Frontend Technologies			
Angular	React	React Native	
Backend Technologies			
Node.js	Python	.NET	REST APIs
Databases			
MySQL	MongoDB (NoSQL)	PostgreSQL	SQLite
DevOps & Systems			
Docker	GitLab CI/CD	Linux	Git-based workflows
Tools & Platforms			
Visual Studio	VS Code	Postman	Figma

EDUCATION

2019 - 2023	Bachelor of Technology - Electrical and Electronics University Visvesvaraya College Of Engineering - K R circle, Bangalore	8.60 CGPA
2019	PUC / 12th Govt P U College Majalatti, Belagavi	89.66%
2017	SSLC / 10th Sri G B Patil High school Harugeri-Cross	95.36%
